

The Floor of Lake Superior

Superior is not a shallow lake with a deep spot in it. It is a trough. The floor falls away fast from almost every shore, and more than half the lake lies under 150 metres of water. It holds more than the other four Great Lakes put together.

Bathymetry and land elevation: NOAA National Centers for Environmental Information. Lake Superior 3 arc-second bathymetry. This grid is a NOAA NCEI publishes it as incomplete, with no contour compilation finished and no DOI assigned. Soundings by NOAA, the US Army Corps of Engineers and the Canadian Hydrographic Service. Contours every metre to 25 m, widening with depth beyond it. Web Mercator. Rendered by [cyanajdak.com](#).
